

Complete 221-gene screens at both COQ8A thresholds

Same four libraries, same TSS ≥ 3 QC and search space | low group = 1 RNA UMI

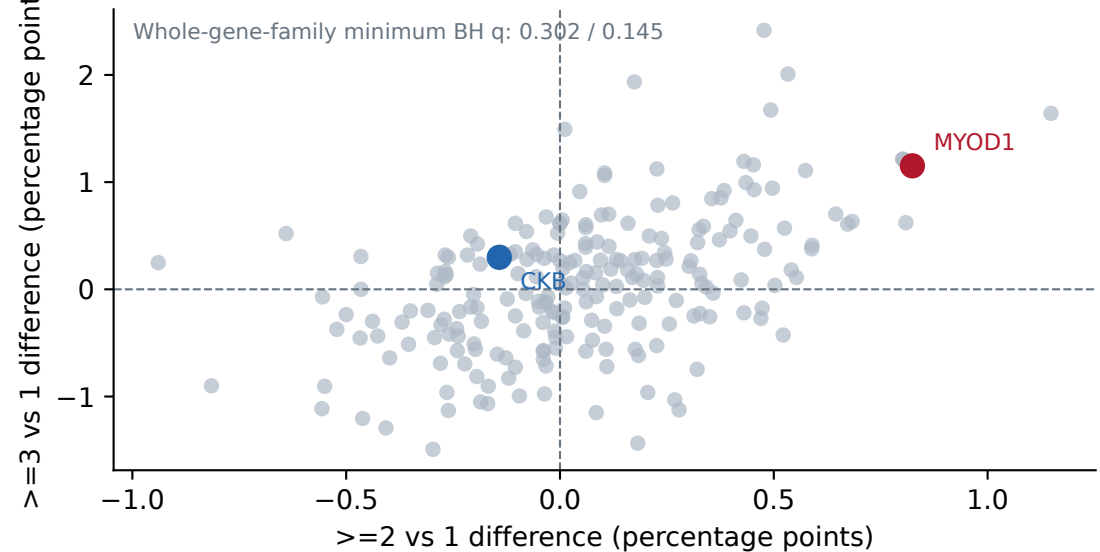

A COQ8A ≥ 2 vs 1 UMI 6,871 eligible peaks; 958 matched pairs

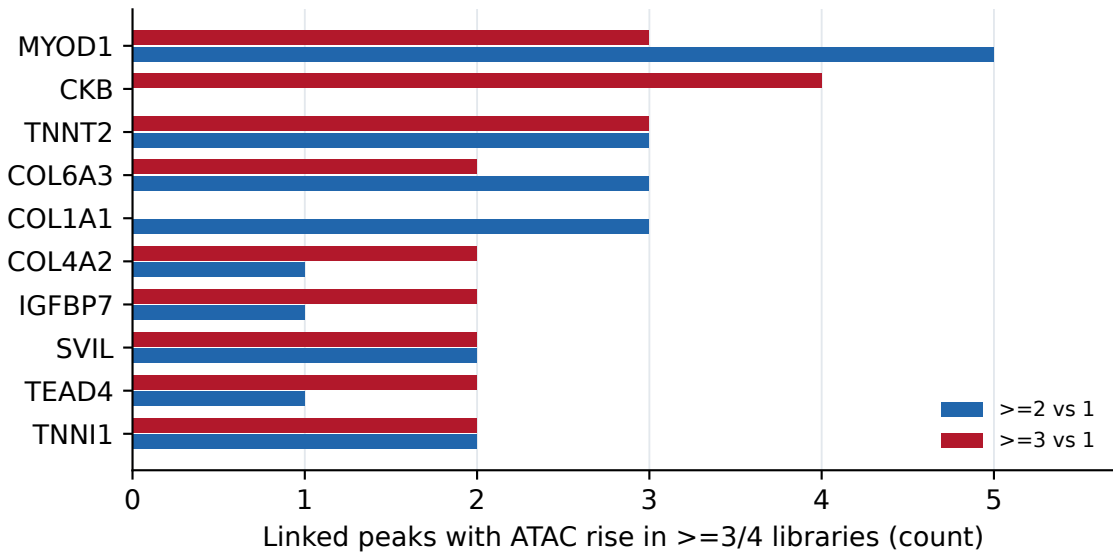

B COQ8A ≥ 3 vs 1 UMI 3,731 eligible peaks; 201 matched pairs

C All 221 gene-region ATAC effects

D Exploratory ranking across both contrasts

A-C: complete test families at each count threshold. D: same-data ranking; RNA links learned in ≥ 2 vs 1 nuclei. MYOD1 ranks 1st / 2nd; the ≥ 3 MYOD1 locus effect is examined in Figure 3.
