

COQ8A groups and TSS accessibility in a fixed myogenesis programme

Two source lines, four RNA/ATAC libraries | COQ8A ≥ 2 versus 1 UMI | ATAC TSS QC ≥ 3

A Within-library matched comparison

Line 1 - stem	Line 1 - differentiated	Line 2 - stem	Line 2 - differentiated
211 high-low nucleus pairs	326 high-low nucleus pairs	296 high-low nucleus pairs	125 high-low nucleus pairs

B Mean ATAC insertion profile across all 221 gene TSSs

GENCODE v48 gene TSS +/- 5 kb; deduplicated ATAC insertions in 100-bp bins, 100-bp display smoothing. Rows are ordered by pooled signal, never by COQ8A effect. This descriptive profile does not select candidate loci.
