

Exploratory MYOD1 locus: which peaks, how large, how stable?

Six selected peaks: 13.27% vs 10.36% open, ratio 1.28x in 201 pairs; 20-setting $q=0.076$. In B: blue ≥ 2 UMI, red ≥ 3 UMI.

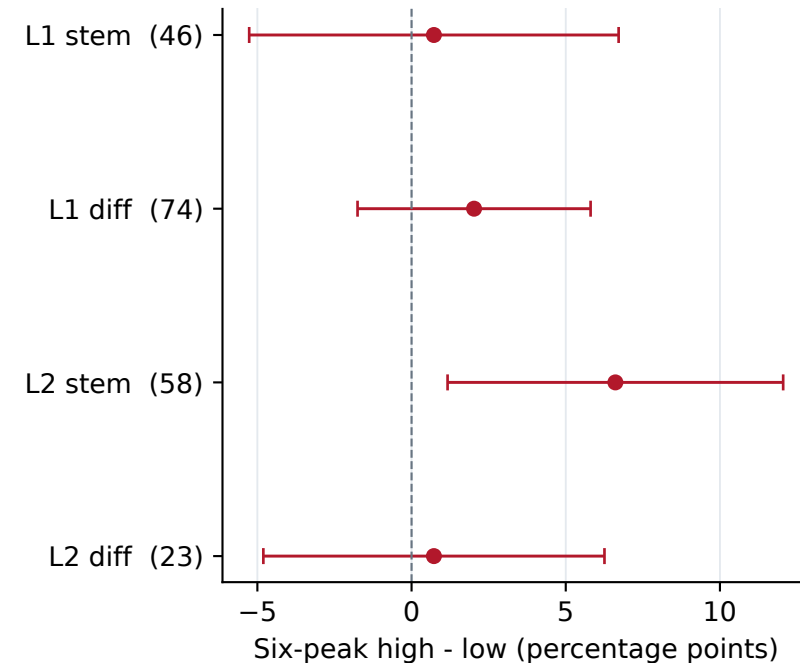

A All 19 four-library-common peaks near MYOD1

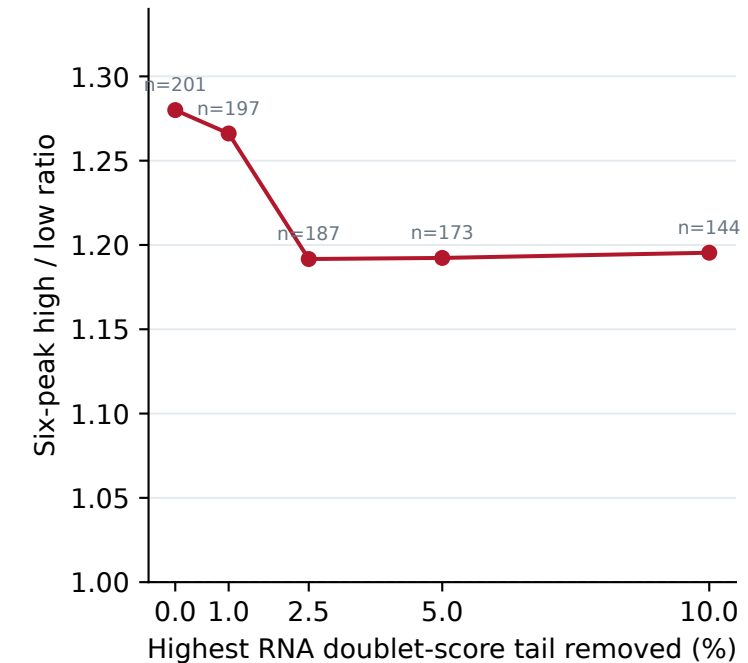

B Region and count thresholds

C Four library directions

D Doublet-score challenge

MYOD1 is a same-data exploratory nomination. Linked subsets were learned in overlapping nuclei; pair-level p and intervals are descriptive, not independent-source replication (source lines $n=2$).
