

COQ8A groups and TSS accessibility in a fixed myogenesis programme

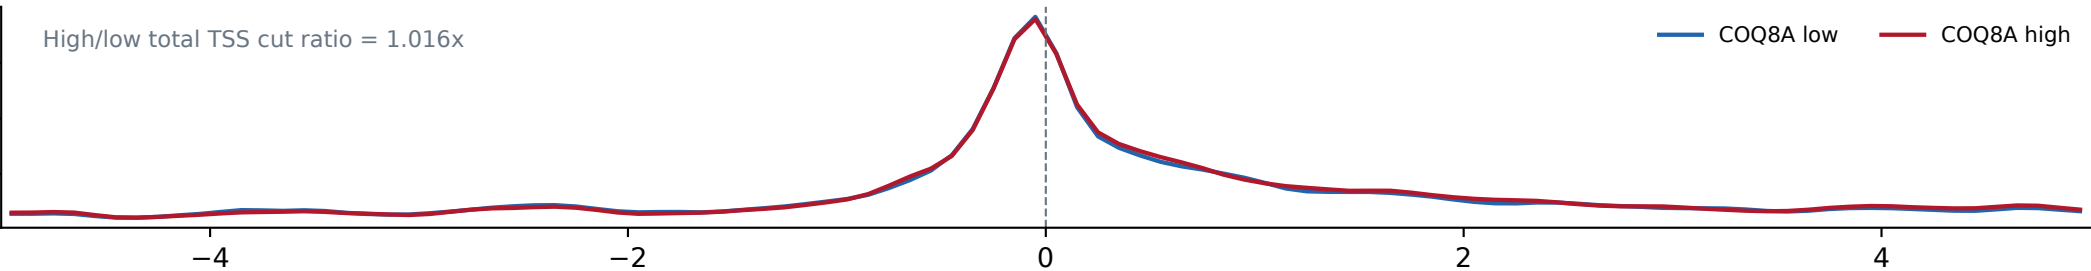

Two source lines, four RNA/ATAC libraries | COQ8A ≥ 3 versus 1 UMI | ATAC TSS QC ≥ 3

A Within-library matched comparison

Line 1 - stem	Line 1 - differentiated	Line 2 - stem	Line 2 - differentiated
46 high-low nucleus pairs	74 high-low nucleus pairs	58 high-low nucleus pairs	23 high-low nucleus pairs

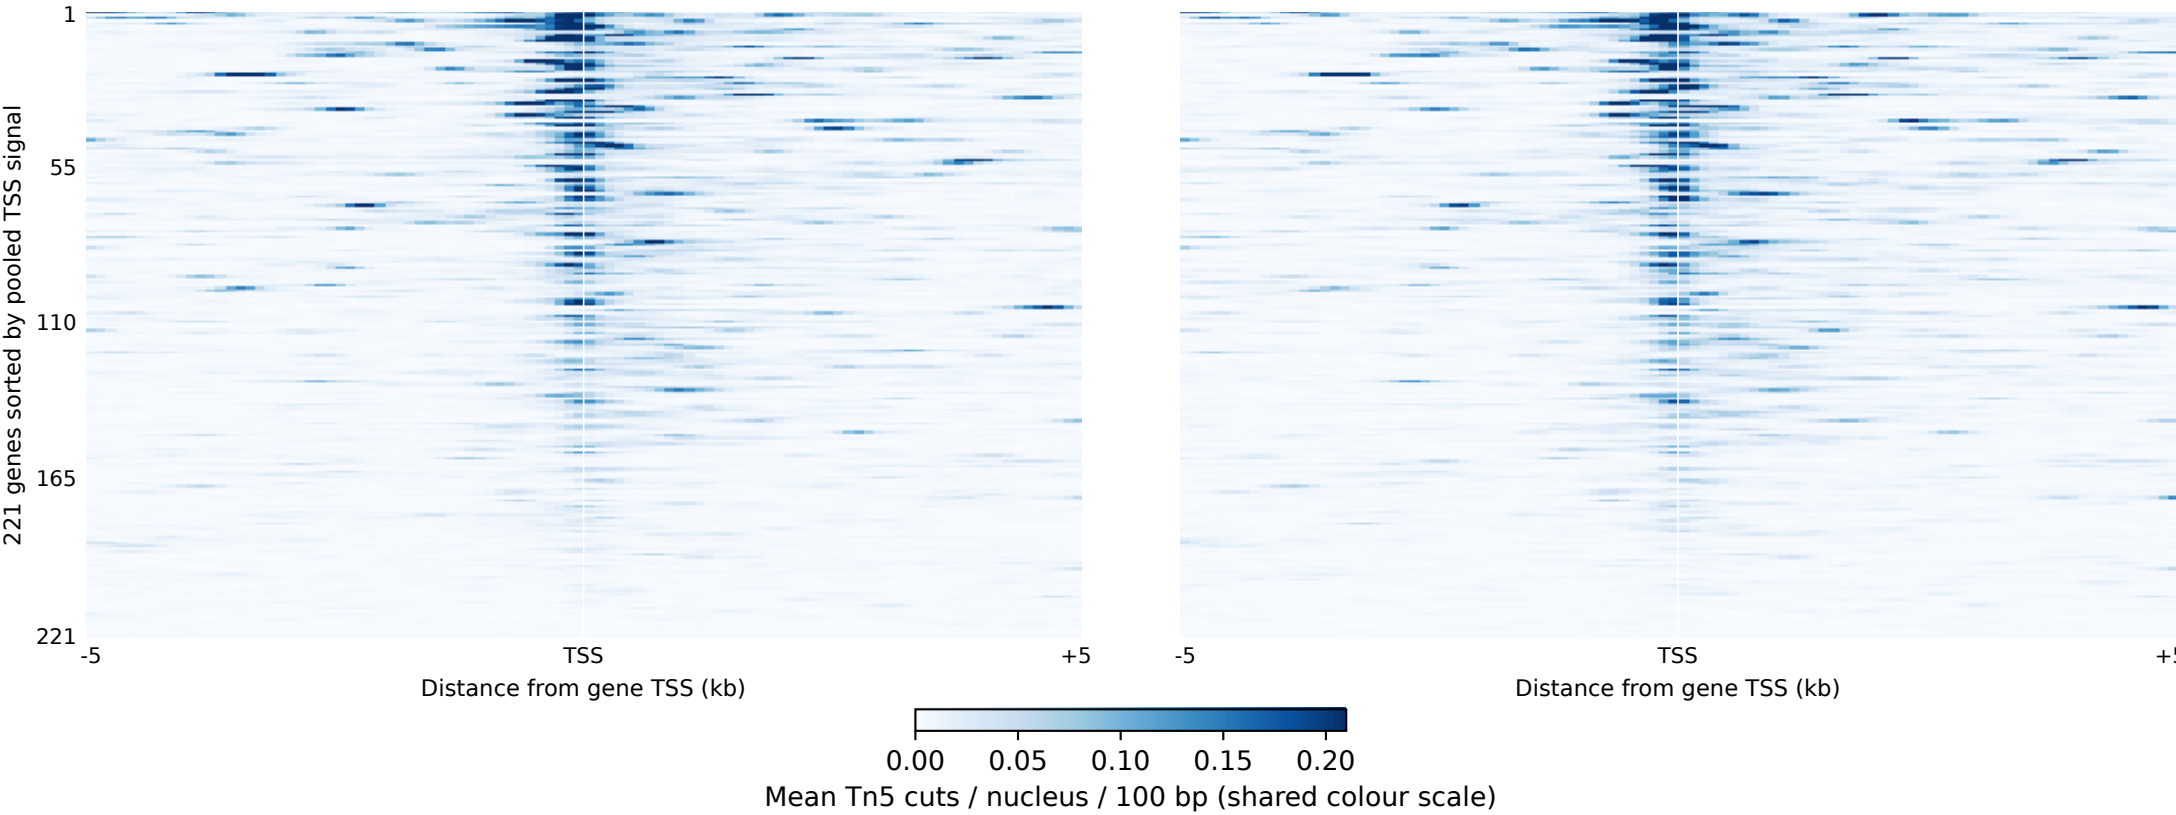

B Mean ATAC insertion profile across all 221 gene TSSs

High/low total TSS cut ratio = 1.016x

C COQ8A low

COQ8A high

GENCODE v48 gene TSS +/- 5 kb; deduplicated ATAC insertions in 100-bp bins, 100-bp display smoothing. Rows are ordered by pooled signal, never by COQ8A effect. This descriptive profile does not select candidate loci.
