

COQ8A-associated myogenesis: from the 221-gene screen to MYOD1

Main effect comparison: COQ8A ≥ 3 vs 1 UMI | TSS enrichment ≥ 3 | 201 matched pairs

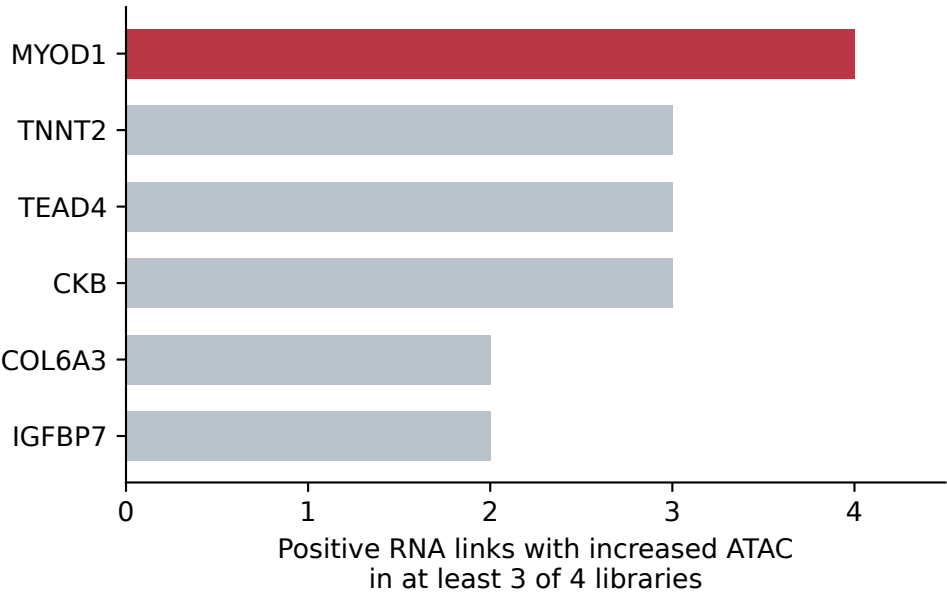

A RNA programme association

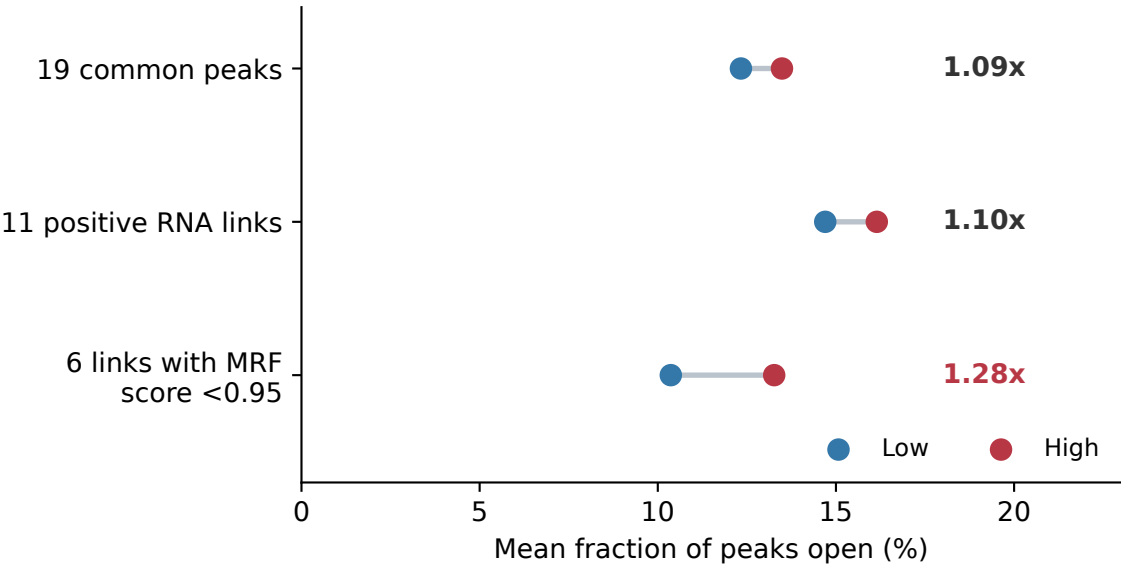

B All 221 ATAC gene regions

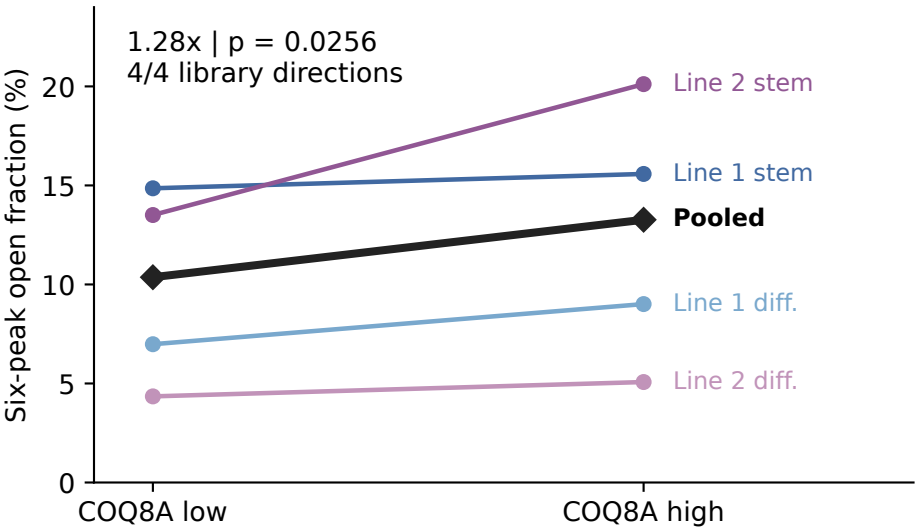

C Rank candidates across 221 genes

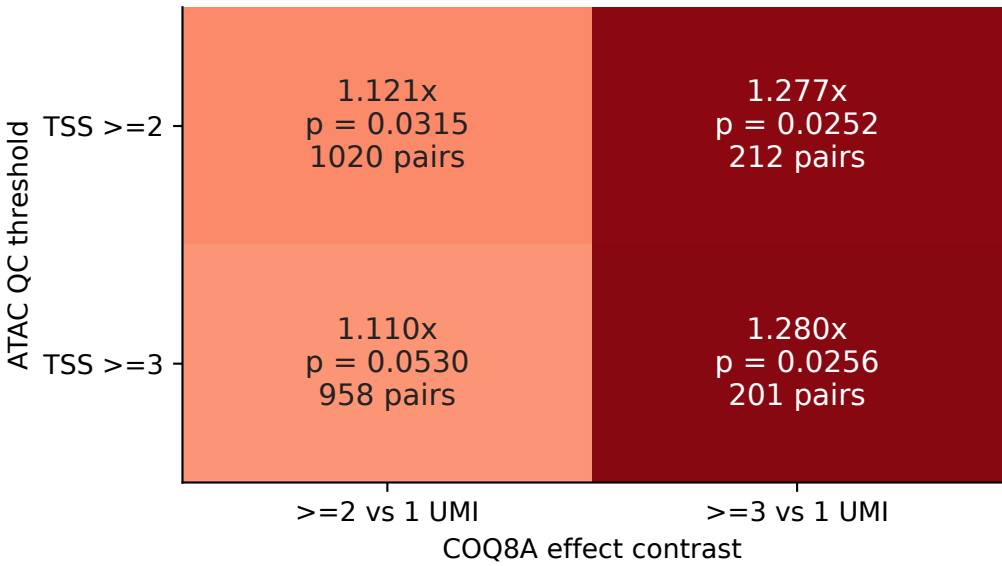

D Focus the MYOD1 region

E The six-peak effect by library

F Fixed six peaks: sensitivity

Links in C-F: COQ8A ≥ 2 vs 1, TSS ≥ 2 ; positive partial correlation, link q <0.05 , four evaluable libraries.
B, E and F show nominal paired-nucleus p values. Four libraries represent two source lines. Exploratory analysis.
